

**Technical Requirements**  
**RUE BARRÉE**  
Duration: 35-45 min

We require a space relatively private or in an area away from the performance space to warm up at least 1.5-2h before performance time. We will need to check out the performance site for at least 10 minutes prior to setting up to perform. We will need access to electricity and a sound system in the form of 1/4 inch aux cable. Possibly some basic lighting if the show will be presented at night. Ideally the performance site would be on ground that is relatively level and flat.

Inform me if any of the conditions conflict with the requirements I have listed. Depending on the situation, adaptations can be made.
